ATK Gun Systems approves  
M-Pro 7 Gun Cleaner for exclusive  
use on all chain gun systems.

ATK Gun Systems (formerly Boeing Gun Ordnance) announces the exclusive use of M-Pro 7 Gun Cleaner on the following guns:

Bushmaster M230 (30mm) (see reverse for more details)  
Bushmaster M242 (25mm)  
Bushmaster MK44 (30mm)  
Bushmaster 3 (35mm)  
Bushmaster .50 cal (in development)

They will also be using it on the 27mm Fighter Aircraft Cannon System on the new Joint Strike Fighter when it begins production.

Not only did the Boeing Company approve M-Pro 7 Gun Cleaner, it is *the only* cleaner approved under specification number HMS20-1267 2216.

“M-Pro 7 Gun Care Products are head and shoulders above all the other products we have used.” Said Cal Calvert, marketing manager for the gun systems, “Our HAZMAT people are very excited about M-Pro 7 because it is non-toxic, but very effective. It is the only thing we use on everything we build.”

**Bushmaster M230 (30mm)** automatic cannon is the heart of the AH-64A Apache/AH-64D Apache Longbow multi-role, multi-target Area Weapon Subsystem. The M230 fires U.S. and NATO Standard ADEN/DEFA 30mm ammunition.

**Bushmaster M242 (25mm)** is the primary armament on the U.S. Army M2 and M3 Bradley Fighting Vehicles, the U.S. Marine Corps LAV-25 light armored vehicle, Mk 38 deck mounts on U.S. Navy patrol boats, and a growing number of vehicles for international defense forces.

**Bushmaster MK44 (30mm)** is a derivative of the popular 25mm M242 Bushmaster automatic weapon. The MK44 is in low rate initial production for the U.S. Marine Corps Advanced Attack Amphibious Vehicle.

**Bushmaster 3 (35mm)** is the newest member of the Chain Gun® family. It incorporates all of the battle-proven features of the 25mm M242 Bushmaster cannon, to offer a safe, reliable weapon system with low life-cycle costs.

**Bushmaster .50 cal (in development)** brings fighter aircraft chain gun technology down to the infantry level. More reliable than traditional link fed systems, this system can be mounted on virtually any .50 cal platform.

**27mm Joint Strike Fighter Aircraft Cannon System** is a single barrel, gas operated, revolver gun system derived from a Mauser designed linkless BK-27 gun which fires electrically primed 27mm x 145 ammunition at 1800 shots per minute.
