M-Pro7 LPX Gun Oil

What do M-Pro7 and Prof. Charles Xavier have in common? With its new blend of synthetic oils, liquid molybdenum and polymer reducing the negative affects of common lubricants, such as evaporation, gumming and separation, M-Pro7 LPX is the next generation of gun oil evolution. Containing a component with the lowest known friction coefficient, LPX is the slickest oil on the market—no wonder it is the only commercially produced lubricant to pass initial military specification trials. Best of all, it functions as a cleaner, too, making LPX more of a marvel than a mutant. Contact M-Pro7: (800) 937-4677; www.mpro7.com

Tactical Tailor Lunar Concealed Carry Pouch

Besides being the better part of valor, discretion also plays a major role in effective handgun concealment. With its inconspicuous, low-profile design, the Lunar Concealed Carry Pouch offers an alternative-carry method for instances when traditional holsters dare not be used. Constructed from heavy-duty, 1000 Denier Cordura nylon, it allows for ambidextrous use and will accept most small- or medium-sized handguns. Silent zipper pulls ensure easy access, while an external pocket provides storage for your cell phone, flashlight or spare magazines. Contact Tactical Tailor: (866) 984-7854; www.tacticaltailor.com

Danner Desert TFX Boots

Designed for soldiers, Desert TFX boots have an aggressive outsole and construction tough enough to survive the worst conditions. Danner's patented lightweight Terra Force X system—which provides durable traction for maximum heel-to-toe energy transfer, maneuverability and protection from arch overwork and fatigue—ensures the perfect degree of stability and support for agility in diverse desert terrain. The boots also contain a rough-out leather upper and the company's Dri-Lex liner, providing superior air and moisture exchange for added breathability. Contact Danner: (877) 432-6637; www.danner.com

The Mako Group T-PODSL

Bipod, vertical fore-grip or light? Why not all three? The Mako Group's T-PODSL provides a new degree of functionality to your rifle by incorporating a high-intensity LED white light, the accuracy and stability of a bipod and the enhanced purchase and maneuverability of a vertical fore-grip—all in a single product. With an output of 100 to 120 lumens, the T-PODSL's light has a run time of 1 to 1½ hours on a single CR123A battery. It also contains a quick-deploy mechanism that provides a stable bipod with a wide stance. Aluminum legs, capable of telescoping over four positions, are topped with wide, contoured tips. Dual cutouts accommodate laser/light pressure pads. The T-PODSL interfaces with 30.15 rails and is available in black, combat green and desert tan. Contact the Mako Group: (631) 880-3396; www.makosecurity.com

Warne RAMP Mount

In our multi-tasking society, why limit Picatinny rails to one optic? You don't have to with the Warne Rapid Acquisition Multi-sight Platform (RAMP)—a combination of matte-black, hard-anodized aluminum and magnesium-phosphate-coated steel—which is designed to interface with any Picatinny rail-equipped upper receiver. A V-notch out clamping system and heavy-duty 8-40 Torx screws create a rock-solid base for return-to-zero capability, even under severe recoil. Each end of the mount contains dual 45-degree rails for mounting additional lasers, lights and reflex-style sights. The RAMP fits small- and large-frame flat-top ARs and is available for both 1-inch- and 30-mm-diameter scopes. Contact Warne Scope Mounts: (800) 683-5590; www.warnescopemounts.com
